1. Introduction

New York State has authorized early voting and, to support this initiative, electronic poll book systems (EPBS) may be used by county board of elections (CBOE).

The New York State Board of Elections (NYSBOE) was tasked with developing and promulgating minimum functional and security standards for any electronic device, and any network or system to which the electronic device is connected, that is used to store or otherwise access a computer-generated registration list (Electronic Poll Book System - EPBS). NYSBOE is also to promulgate a list of systems that are approved for use. No local board of elections shall be permitted to use such a system unless NYSBOE has previously approved it for use and has certified that the network to which any components are connected is compliant with the minimum-security standards.

To accomplish this, NYSBOE developed an evaluation process designed to validate via vendor attestations, provided artifacts and demonstrations that mandatory functional, non-functional, security, and networking requirements were understood and able to be met by each EPBS submitted for review. Requirements were evaluated against each vendor configuration for determination if the requirement has been implemented and observed via demonstration or explained and attested to by the vendor. Each requirement based on this approach was then marked successfully (Pass) or unsuccessfully (Fail).

Each system was also reviewed to determine its ability to fulfill the requirements under Section 8-508 of NYS Election Law providing for the production of a Challenge Report. This functionality was considered optional and only systems claiming to support this functionality were reviewed for compliance against the specific requirements developed by NYSBOE for this purpose.

NYSBOE also partnered with the NYS Division of Homeland Security and Emergency Services (DHSES) and the NYS Technology Enterprise Corporation (NYSTEC) for performing vulnerability scans of all applicable system components for any potential vulnerabilities and to confirm that no unnecessary ports or services were exposed beyond those required for the operation of the system. In addition, DHSES scanned all submitted systems to determine if information was being properly protected through encryption. NYSTEC was also engaged to review a subset of technical documentation submitted by each vendor and to provide assurance that documentation requirements were addressed. In addition, they reviewed NYSBOE's evaluation of functional and security requirements to provide assurance that all processes were followed consistently for each system reviewed.

A submitted configuration will be considered for approval if the EPBS successfully passes the above evaluation process, has a documented non-impact issue that has no negative effect on system usage or implements an approved compensating control(s).

Further details on the results of the observations and demonstrations conducted by NYSBOE and its partners are contained in the information below.

2. System Overview

Robis Elections Inc. submitted their AskED ePoll Book system, Version 3.4, for State Board approval. The Robis system generally consists of one of two hardware configurations to be used by poll workers for checking in voters at poll sites. These hardware devices may also utilize peripherals (signature pad, printer, etc.) for this process. Network devices then allow for a secure connection between these devices and the AskEd Command Center backend application utilized by the overall system.

Both hardware configurations used at poll sites for checking in voters run a Windows-based application which, in one configuration, was installed on a HP Pro Book X360 laptop. In a second hardware configuration, the application was installed on a Microsoft Surface Go tablet. Both hardware configurations were running Windows 10 Pro.

The network configuration tested was a Verizon Wireless USB Cellular Modem connected to a Pepwave Surf SOHO Router.

The AskED Command Center is an externally-hosted web-based application which is used for managing all data exchanges to/from the ePoll Books as well as handling all reporting, and the importing and exporting of election data by a County Board of Elections (CBOE).

3. Documentation/Artifact Compliance

To ensure compliance with a number of designated functional and security requirements, vendors were required to provide documentation or narratives, along with any relevant artifacts, which provided evidence of such compliance. Examples of artifacts included, but were not limited to, screenshots, logs, sample reports, etc. Some requirements mandated that a vendor describe their system's ability, or inability, to support certain functionality without necessarily requiring the functionality itself be present.

All initial written responses were reviewed to determine if the submissions, along with any artifacts provided, demonstrated clear evidence of requirement compliance. If the vendor's system did not EPBS Evaluation Vendor Assessment Report – Robis Elections, Inc. 5

provide for the functionality mentioned in a specific requirement, then the vendor provided a description explaining as much. If a compensating control or additional information was needed for a system to successfully meet a given requirement, such information was provided by the vendor for review by NYSBOE. The findings presented below are separated into the application packet categories of Functional Requirements, Security Requirements and Challenge Report.

3.1 Written Responses/Artifacts to Identified Requirements

3.1.1 Functional Requirements

Nineteen (19) functional requirements required a written response and/or artifact submission. After examination and review of the totality of documentation provided by the vendor as part of this process, it was determined that all designated mandatory functional requirements had been satisfactorily met or attested to.

3.1.2 Security Requirements

Fifty-five (55) security requirements required a written response and/or artifact submission. After examination and review of the totality of documentation provided by the vendor as part of this process, it was determined that all designated mandatory security requirements had been satisfactorily met or attested to.

3.1.3 Challenge Report (Optional)

One challenge report requirement required a written response and/or artifact submission. After examination and review of the totality of documentation provided by the vendor as part of this process, it was determined that the designated challenge report requirement had been met or attested to.

Technical Note: In order to use the Challenge Report functionality included in the AskED ePoll Book solution, a location must have network connectivity to the AskED Command Center. If a location does not have network connectivity, then the location must follow the existing, paperbased Challenge Report process.

3.2 Technical Data Package

Each vendor was required to provide a Technical Data Package (TDP) for their system. This documentation defines the required design configuration, technical information and any procedures required to ensure adequacy of system performance.

Technical Data Package contents were required to include the following:

- System configuration overview
- System hardware specifications
- System test and verification specifications
- User/system operations procedures
- Personnel deployment and training requirements
- Quality assurance program
- System functionality description
- Software design and specifications
- System security specifications
- System maintenance procedures
- Configuration management plan
- System change notes •

NYSTEC performed an examination and review of the totality of materials provided by the vendor and reported their findings to NYSBOE. It was then determined by NYSBOE that the submitted documentation demonstrated compliance with this requirement.

4. Vendor Demonstrations and Observations

An on-site demonstration conducted by Robis Elections Inc. of the mandatory functionality for each requirement was conducted on May 22, 2019. During this demonstration, the system was observed to determine if each requirement had been met. The findings presented below are separated into the application packet categories of Functional Requirements, Security Requirements and Challenge Report.

4.1 Functional Requirements

Fifty-three (53) functional requirements required a vendor demonstration. After review of this system during the demonstration provided by the vendor as part of this process, it was determined that all designated mandatory functionality requirements had been satisfactorily demonstrated.

4.2 Security Requirements

Thirty-four (34) security requirements required a vendor demonstration and/or support and stated compliance via submission of a TDP and/or supporting documentation. After review of this system during the demonstration provided by the vendor as part of this process, it was determined that all designated mandatory security requirements had been satisfactorily demonstrated or compliance was stated via attestation and through provided documentation. EPBS Evaluation Vendor Assessment Report – Robis Elections, Inc.

4.3 Challenge Report (Optional)

Seven (7) challenge report requirements required a vendor demonstration (if the vendor's submission include this functionality). After review of this system during the demonstration provided by the vendor as part of this process, it was determined that the designated challenge report requirement had been satisfactorily demonstrated.

Technical Note: In order to use the Challenge Report functionality included in the AskED ePoll Book solution, a location must have network connectivity to the AskED Command Center. If a location does not have network connectivity, then the location must follow the existing, paperbased Challenge Report process.

5. Vulnerability Scanning

NYSBOE partnered with the NYS Division of Homeland Security and Emergency Services (DHSES) and NYSTEC to perform vulnerability scanning as part of the evaluation of each EPBS submitted.

5.1 NYS Division of Homeland Security and Emergency Services Testing

DHSES was responsible for performing the following objectives of the vulnerability scanning and traffic inspection:

- Perform non-authenticated vulnerability scanning all EPBS hardware devices provided; and
- Validate data confidentiality is maintained during both external data transmissions to a vendor cloud service, and data transmissions between two EPBS devices connected to the same local network.

As a result of their testing, DHSES found that no critical, high, medium, or low vulnerabilities were identified on the HP ProBook laptop or the three Surface Go tablets scanned. DHSES did identify a number of ports that were open on both hardware configurations. The vendor was asked to explain if there was a business function requiring these ports to be left open or if they could be closed. The vendor explained that those open ports were a result of the network configuration being placed in "private" mode. Changing that configuration to "public" closed those previously open ports. In addition, validation of peer-to-peer transmission confidentiality could not be performed by DHSES during their testing. However, the vendor was able to provide a satisfactory demonstration of the encrypted peer-to-peer communication of their system during their in-person demonstration.

5.2 NYSTEC Vulnerability Scanning

NYSTEC researched each solution and, working with the team doing the security testing of the EPBS, ascertained how the devices themselves and the administration/management interface to the systems were architected. Also in scope, was identifying the URLS and IP addresses to which they connected. From this, test plans were created to use three (3) separate security tools to scan those online endpoints.

The tools used to perform the scanning were:

- AppScan
- Nessus
- WebInspect

For this testing the scans were all unauthenticated and from the internet. The goal of the scanning was to identify ports and services, that may be open and represent potential points of attack, beyond those ports and services which are open, available and necessary to support the following:

- Communication from pollbooks to server(s)
- Communication from system administrators to administrate and manage the system, data and individual pollbooks.

The scan types completed by NYSTEC were basic network and web application scans (AppScan and Nessus) and OWASP Top 10 (for WebInspect) with defaults enabled. The systems scanned were as configured by the vendors. Manual application testing, penetration testing and other security testing were not in scope.

There was nothing found in any of the scans that raise concerns or disqualify any of these systems.

6. Conclusion

After completing its evaluation of the system configurations submitted by Robis Elections Inc., as described in this document, the Election Operations Unit has determined that this system has shown compliance with all mandatory functional and security requirements through submitted documentation and in-person demonstration. Vulnerability scanning performed did not identify any issues that would raise security concerns for its use. Therefore, we are recommending the electronic poll book system submitted by Robis Elections, Inc. for approval.

Such approval is based on the Electronic Poll Book System's hardware and software submitted by the vendor and reviewed by the State Board of Elections. Should the vendor make, or plan to make, any modifications or alterations to the Electronic Poll Book System's hardware and/or software, such modifications or alterations shall be reviewed by the State Board of Elections for approval, consistent with its "Electronic Poll Book System Change Management Procedure".

CELL PHONE: 630-750-0527

Description of EPBS:

The AskED ePollbook provides a completed system for checking in voters, tracking pollworker time and assisting pollworkers with "just-in-time training™" for anything else that happens in the polling place. In addition to checking in voters, the AskED ePollbook gives you a window into what is happening at each polling place and allows you to better manage your entire jurisdiction.

Applicant hereby agrees:

To provide the Electronic Poll Book System (EPBS) and to furnish all documentation/artifacts required by the state board of elections or its designee. Applicant underslands that it may be required to place the EPBS in the state board's possession or as long as such system is in use in New York State.

That the submitted EPBS complies with all applicable requirements and standards adopted by the state board and is suitable for use by County Board of Elections.

That the submitted EPBS software does not contain any code, procedures or other material (including but not limited to 'viruses', 'worms', 'time bombs', and 'drop-dead' devices that may cause the EPBS to cease functioning at a future time), which may disable, damage, disarm or otherwise affect the proper operation of the EPBS, any hardware, or any system or other property of state board or county board.

Applicant consents to vulnerability and penetration testing on their electronic poll book system as allowed by Public Law 105-304 - Digital Millennium Copyright Act, §1201(j) Security Testing.

All proposals and submissions are subject to New York's Freedom of Information Law. It is the policy of the New York State Board of Elections, in relation to applications for approval of EPBS, that the State Board shall make available to the public all non-proprietary documentation submitted by the Vendor. The Vendor may designate those portions of the proposal that contain trade secrets or other proprietary data that must remain confidential. Blanket statements that either attempt to cover all information in a document, or which allows for a reactive assertion of exemption by the Vendor upon a future request for disclosure, will not be accepted.

7.2 Functional Requirements

Req #	Electronic Poll Book System Functional Requirements	Status	Category	Demonstr ation	Respons e/Artifa ct	Pass/Fail
F-1	The parts of the electronic poll book system to be used at the poll site (EPBS-PS) shall have the capability to be labelled, locked and sealed in carrying cases with tamper-evident security seals when transported to and from the county board of elections.	Mandatory	Security	x		Pass
F-2	The EPBS-PS shall have the capability to be labelled, locked and sealed in carrying cases with tamper-evident security seals when not in use at the poll site.	Mandatory	Security	x		Pass
F-3	The EPBS-PS shall support a dual authentication feature where the coordinated action of (2) election inspectors who are not members of the same political party is required to enable use of the electronic poll books when poll sites open.	Mandatory	Security	x		Pass
F-4	The EPBS-PS shall display the date of the election being conducted on each screen.	Mandatory	Functional	х		Pass
F-5	The EPBS-PS shall be capable of utilizing an "appropriate marking device" to capture the signature as signed by the registered voter.	Mandatory	Functional	x		Pass
F-6	The EPBS-PS shall conceal the voter's facsimile signature until after the voter has completed signing their signature, at which point both signatures will be displayed for inspector comparison.	Mandatory	Functional	x		Pass
F-7	The EPBS-PS shall have the ability to display an electronic list of voters in alphabetical order for a: - single election district or - poll site.	Mandatory	Functional	x		Pass
F-8	The EPBS electronic list of voters shall be generated from a computer registration file for each election.	Mandatory	Functional	х		Pass
F-9	When used at a primary election, the EPBS-PS shall have the ability to display the names of the voters enrolled in a particular political party.	Mandatory	Functional	x		Pass
F-10	The EPBS shall display, for each voter record, at least the following: - County Voter ID - Name - Street Address - Town, City or Ward - Election District - Assembly District, where appropriate - Date of Birth - Date of Registration (Month/Day/Year) - Party enrollment - Facsimile of the voter's signature or an indication that the voter is unable to sign his/her name - A notation indicating if the voter's identity was not yet verified as required by the federal Help America Vote Act.	Mandatory	Functional	x		Pass

Req #	Electronic Poll Book System Functional Requirements	Status	Category	Demonstr ation	Respons e/Artifa ct	Pass/Fail
F-11	The EPBS-PS shall include for each voter listed the following: - Place where a voter can sign his/her name or where it can be indicated by the inspectors that a voter is unable to sign his/her name - For voters requiring assistance, a place to enter the name of each officer or person rendering such assistance - Place for inspectors to record the number appearing on the stub of any election day paper ballot given to the voter, or other information to allow for ballot reconciliation - Place for inspectors to sign their names or initials after satisfaction of signature comparison and by comparison of his/her appearance with the descriptive material in the poll record - Place for inspectors to indicate that a voter has produced one of the required types of identification if ID has not been verified.	Mandatory	Functional	x		Pass
F-12	For voters requiring assistance, the EPBS-PS should display the assistance oath.	Optional	Functional	х		Pass
F-13	For the canvass of absentee, military or special ballots, or ballots cast by voters with registration poll records missing, or for voters that have not had their identity previously verified or who have moved after registering, the EPBS shall provide an ability for the inspectors to place their initials in a space provided if the person is found to be registered and signatures are found to correspond.	Optional	Functional	x		Pass
F-14	For voters described in F-13, the EPBS shall provide an ability for the inspectors to record information including but not limited to the following items: - absentee vote, - military vote, - year of election, - month of election	Optional	Functional	x		Pass
F-15	The EPBS-PS shall enable a poll worker to search for a voter's record. Search criteria must include either a complete or partial match to one or more of the following: - Last Name - First Name - Date of Birth - Address	Mandatory	Functional	x		Pass
F-16	For primary elections, the search criteria should include all items from F-15, as well as Party Enrollment.	Optional	Functional	x		Pass
F-17	The EPBS-PS shall have the ability to display the names of special federal voters separate and apart from other voters contained in the list.	Mandatory	Functional	x		Pass

Req #	Electronic Poll Book System Functional Requirements	Status	Category	Demonstr ation	Respons e/Artifa ct	Pass/Fail
F-18	The EPBS-PS may provide a street finder or other tool that would enable election inspectors and/or poll site coordinators to determine the correct election district and polling place for a voter who is in an incorrect poll site.	Optional	Functional	x		Pass
F-19	The EPBS shall indicate whether a voter has already cast a ballot.	Mandatory	Functional	х		Pass
F-20	In addition to alphabetical order, the EPBS-PS should be configurable to provide a list of voters in some other order defined by an administrative user.	Optional	Functional	x		Fail
F-21	The vendor shall describe how their EPBS shall be configurable to allow for the importing of voter registration data from voter registration systems in use by a County Board of Elections in New York State.	Mandatory	Functional	x	x	Pass
F-22	The EPBS shall provide the ability for county board of elections staff to verify the import of any and all data previously exported from the county board's voter registration system (voter records, poll site files, etc.).	Mandatory	Functional	x		Pass
F-23	The EPBS shall be configurable to allow for the exporting of election data (both early and election day) in a format that can be imported into any voter registration system in use by a County Board of Elections in New York State.	Mandatory	Functional	x		Pass
F-24	The EPBS shall be capable of exporting voter history in a format that can be used to transfer such information into any voter registration system in use by a County Board of Elections in New York State.	Mandatory	Functional	x		Pass
F-25	The vendor shall describe the process by which maintenance and diagnostic activities of EPBSs, when performed by an entity other than a CBOE, is coordinated with a CBOE, and what allowances the CBOE has to monitor and control these activities.	Mandatory	Functional		x	Pass
	The EPBS shall have the ability to export any voter signature captured by a EPBS-PS in a well established, non-proprietary format.	Mandatory	Functional	x		Pass
F-27	The EPBS must guarantee that a voter can be checked in at most once during normal connectivity.	Mandatory	Functional	х		Pass
F-28	The EPBS shall identify voters that have been checked in at two or more different electronic poll books.	Mandatory	Functional	х		Pass
F-29	In the event of a temporary interruption of connectivity within an EPBS, the EPBS-PS must permit the continuation of the voter check-in process.	Mandatory	Functional	x		Pass
F-30	In the event of a temporary interruption of connectivity within an EPBS, the EPBS must automatically restore voter list consistency across the EPBS-PS after connectivity is restored.	Mandatory	Functional	x		Pass
F-31	In the event of a temporary interruption of connectivity within an EPBS, the EPBS must indicate that there has been an interruption of connectivity by entering relevant event information into the audit log.	Mandatory	Functional	x		Pass

Req #	Electronic Poll Book System Functional Requirements	Status	Category	Demonstr ation	Respons e/Artifa ct	Pass/Fail
F-32	The vendor shall describe the process by which they will develop and provide training options and materials to each County Board of Elections under contract which will allow CBOE staff and polling inspectors to be trained in the use of the EPBS/EPBS-PS, where appropriate.	Mandatory	Training		x	Pass
F-33	The vendor shall provide help-desk support to each County Board of Elections under contract and describe the following: - Help-desk ticket submission process - Help-desk ticket response time standards (follow-up and resolution). - Help-desk ticket escalation and resolution model - Help-desk ticket status reporting - Schedule of Help-desk hours of operation and availability (at minimum help-desk support must be provided from 9:00 a.m. to 5:00 p.m. – Eastern Time – Monday to Friday.	Mandatory	Technical Support		x	Pass
F-34	The vendor shall provide enhanced help desk services to support CBOE during the following peak timeframes: - For the period of Early Voting Day 1 to Early Voting Day 9, telephone support shall be provided between the hours of 5:00 am and 10:00 pm Eastern Time. - For the period including Election Day minus 1, Election Day and Election Day plus 1, telephone support must be available during this entire 72-hour period. - For the post election period, which is defined as Election Day plus 1 through Election Day plus 15, phone support shall be provided by the vendor, on each of said days, between the hours of 7:00 am until 7:00 pm, EST.	Mandatory	Technical Support		x	Pass
F-35	The EPBS shall have the ability to generate reports based on any defined data fields.	Mandatory	Reporting	x		Pass
F-36	Vendor shall provide a list of data fields which the EPBS is capable of generating a bar code for in a report.	Mandatory	Reporting		х	Pass
	The EPBS should allow authorized users the capability to create, modify and save custom reports and queries.	Optional	Reporting	х		Pass
F-38	The EPBS shall generate reports in a well established, non- proprietary format including, but not limited to, one of the following: - Hypertext Markup Language (.html) - Microsoft Excel (.xlsx) - Microsoft Excel (.csv) - Adobe Acrobat Portable Document Format (.pdf) - Microsoft Word (.docx) - Rich Text Format (.rtf)	Mandatory	Reporting	x		Pass
F-39	The EPBS should allow authorized users to select from a list of available report templates and enter report criteria prior to generating the report.	Optional	Reporting	x		Pass
F-40	The EPBS shall allow authorized users to view reports before saving or printing them.	Mandatory	Reporting	х		Pass

Req #	Electronic Poll Book System Functional Requirements	Status	Category	Demonstr ation	Respons e/Artifa ct	Pass/Fail
F-41	The EPBS should allow including the name of the report, the date generated, and the page number on each page of a report.	Optional	Reporting	x		Pass
F-42	The vendor shall describe the required electrical supply specifications for the EPBS-PS in polling places.	Mandatory	Power/Battery		х	Pass
F-43	The vendor shall describe the EPBS-PS battery specification including but not limited to: - Hours of continual use by inspectors - Hours of stand-by (when not being used to check in a voter)	Mandatory	Power/Battery		x	Pass
F-44	The vendor shall describe how to: - Charge the EPBS-PS battery before deployment to a poll site - Charge the EPBS-PS battery at the poll site both during voting hours and when the polls are closed (include specification on power plug length)	Mandatory	Power/Battery		x	Pass
F-45	The vendor shall describe how the EPBS-PS retains its data when power to the device is exhausted.	Mandatory	Power/Battery		х	Pass
F-46	In the event of a temporary loss of power, the EPBS-PS must permit a voter to check-in. The electronic poll book system's battery supply must allow for at least two (2) hours of operation without external power supply.	Mandatory	Power/Battery	x		Pass
F-47	The EPBS-PS shall be configured in such a way that the operator is provided with a continuous visual indication of whether the device is operating on battery or AC power and, if the former, a visual indication of how much battery power remains.	Mandatory	Power/Battery	x		Pass
F-48	The EPBS-PS shall be capable of automatically switching to a backup power source (e.g. battery) and not interrupt the operation or integrity of the data.	Mandatory	Power/Battery	x		Pass
F-49	The EPBS shall concurrently support all connected devices from all poll site locations within the county.	Mandatory	Non-Functional	x		Pass
F-50	The vendor shall attest that they will have the ability to deliver the contracted number of EPBS-PS. If the vendor contracts with all CBOE, the estimated number is between 18,000 and 20,000 EPBS-PS.	Mandatory	Non-Functional		x	Pass
F-51	As of the date of the vendor's application for approval of the EPBS by the NYSBOE, the vendor must provide a complete and working iteration of their EPBS to NYSBOE including, but not limited to: - At least three (3) EPBS-PS devices - Any equipment, as defined in the configuration submitted, necessary to network the devices either together or to a backend software system - URL and credentials to access any hosted or cloud-based backend software system configured to work with any hardware	Mandatory	Non-Functional		x	Pass
F-52	The vendor must provide a list of customers who are using, or have previously used, the vendor's EPBS. This list must be current as of the date of the vendor's application for approval of the EPBS by NYSBOF.	Mandatory	Non-Functional		x	Pass

Req #	Electronic Poll Book System Functional Requirements	Status	Category	Demonstr ation	Respons e/Artifa ct	Pass/Fail
F-53	The vendor must provide a description of any known anomalies in the function of the EPBS as well as a description of the method for resolving those anomalies. This list must be current as of the date of the vendor's application for approval of the EPBS by NYSBOE.	Mandatory	Non-Functional		x	Pass
F-54	The vendor shall provide instructions and materials sufficient for the CBOE to carry out a pre-election test of the EPBS (including EPBS-PS) to verify the integrity of the system components before their use in an election.	Mandatory	Non-Functional	x	x	Pass
F-55	The EPBS shall provide means for the integration of an additional EPBS-PS into its configuration at any point throughout the election without requiring a shutdown or a restart of the EPBS. This system event must be documented in the audit log	Mandatory	Technical	x		Pass
	The EPBS shall provide means for the exclusion of an existing EPBS-PS from its configuration at any point throughout the election without requiring a shutdown, or restart of the EPBS. This action does not require physical access to the EPBS-PS that is to be excluded. This system event must be documented in the audit log	Mandatory	Technical	x		Pass
F-57	Each EPBS-PS within an EPBS configuration must have a unique identifier. Any component within an EPBS configuration must be able to uniquely identify said EPBS-PS by its identifier.	Mandatory	Technical	x		Pass
F-58	The EPBS must be designed to tolerate any single point of failure scenarios.	Mandatory	Technical	х	х	Pass
F-59	The EPBS-PS shall have the capability to display a prompt or warning if an individual cannot be found in the list of voters during the check in process.	Mandatory	Functional	х		Pass
F-60	An EPBS-PS must provide a user interface through which authorized users can verify an individual's voting eligibility and document the voter's election related activity.	Mandatory	User Interface	x		Pass
F-61	The EPBS-PS should provide election inspectors with access to on-screen support, configurable by administrative users and relevant to the action being executed at a given time.	Optional	User Interface	x		Pass
F-62	The EPBS must provide a user interface through which authorized users can configure the system. This includes the initial setup of the system, reconfiguration, viewing the current configuration, as well as adding or removing an EPBS-PS device.	Mandatory	User Interface	x		Pass
F-63	The EPBS must provide a user interface through which authorized users can manage user accounts. This includes adding and disabling and managing their access privileges.	Mandatory	User Interface	х		Pass
F-64	The EPBS-PS may include a bar code reader.	Optional	Barcode	Х		Pass
F-65	The EPBS-PS should display a voter's record based on the processing of information contained within a bar code when scanned by a bar code reader.	Optional	Barcode	x		Pass

Req #	Electronic Poll Book System Functional Requirements	Status	Category	Demonstr ation	Respons e/Artifa ct	Pass/Fail
	The vendor shall describe how their EPBS supports existing Section 203 Language Provisions of the Voting Rights Act and the ability to add languages if designated by the Director of Census.	Mandatory	Functional		х	Pass
F-67	The vendor shall describe how their EPBS provides accessibility functionality for voters with disabilities (e.g. high contrast, large font or audio).	Mandatory	Functional		х	Pass
	The EPBS should be capable of importing ballot schema that will enable the printing of a receipt with the voter's ballot style or be used in conjunction with a ballot on demand printer solution.	Optional	Functional	x		Pass
F-69	Vendor shall provide the results and supporting documentation related to any 3rd party or internal usability testing performed on the EPBS. Supporting documentation shall include, but not be limited to, test plans, test cases and results from all usability testing that was conducted.	Mandatory	Functional		х	Pass

Vendor should provide, for any cloud hosted components, proof that those components have achieved a FedRAMP compliance and are hosted by a FedRAMP authorized cloud service provider. Vendor should provide proof of FedRAMP compliance as well as documentation of who is responsible for each required security control.	Vendor shall provide software system design documentation describing the logical design of the software. This documentation shall clearly indicate the various modules of the software, their functions, and their interrelationships with each other. This shall include the data format(s) the system is capable of importing and exporting.	Vendor shall provide a system architecture diagram for their proposed solution that includes a description of how the solution is architected addressing on-prem and cloud or hosted or any hybrid combination thereof. If customer systems are needed to host software, information on how those systems must be configured and hardened shall be provided.	Vendor shall provide a system overview and functional diagram of the entire EPBS and how each component integrates into it. The description shall include how the entire system is administered, configured and managed.	Electronic Poll Book System Security Requirements

The EPBS shall employ the principle of least privilege for each permitted role within the system, allowing only authorized accesses for users (or processes acting on behalf of users) that are necessary to accomplish assigned tasks such as poll worker and voter roles as well as administrators. Vendor shall document how incorporated role based access controls accomplish this.	The EPBS shall incorporate protections to prevent fraudulent manipulation of the voter check-in process. Vendor shall describe both the preventative and detective controls within the system.	The EPBS shall support the use of multi-factor authentication for all privileged and administrator access other than at the poll site.	Vendor shall provide documentation on how the poll book solution and its related components have been hardened to any applicable Center for Internet Security (CIS) benchmarks, or to other standards (e.g., DoD DISA STIGs). Name all standards used and to which component they apply to (e.g., servers, mobile devices, wireless).	Electronic Poll Book System Security Requirements

Vendor shall provide documentation on how their Software Development Life Cycle (SDLC): a. Aligns with industry standard SDLC practices to incorporate information security control considerations b. Identifies individuals having information system security roles and responsibilities c. Integrates the organizational information security risk management process into system development life cycle	The EPBS shall: a. Conduct backups of user and system level information contained in the EPBS in a configurable frequency b. Protect the confidentiality, integrity, and availability of backup information	The EPBS shall be able to recover from the following events: a non-catastrophic failure of an electronic poll book, a power failure, or from any error or malfunction that is within the poll worker's ability to correct. Recovery from a non-catastrophic failure will mean the restoration of the electronic poll book to the operating condition existing prior to the error or failure, without loss or corruption of data previously stored in the device.	The EPBS shall support a hot-swappable feature to be configured in such a manner to automatically replicate and securely encrypt a copy of the data at any time to a removable/relocatable memory device or via obtaining configuration data from another electronic poll book device. The saved or imported data will be sufficient to restore another electronic poll book in the event of a malfunction. This functionality shall not require a network connection beyond connections to other poll books at the <u>boll site</u> .	Electronic Poll Book System Security Requirements

Q

		Status	Caregory	Demonstration
CR-1	County Board of Elections are required to complete a challenge report based on the criteria set forth in New York State Election Law §8–508. Challenge report; preparation.	Mandatory		Functional
	The vendor shall describe if and how their solution implements the requirements for each section of the challenge report. If the vendor's solution does not meet the challenge report requirements, the vendor shall document 'solution does not implement this functionality' in their response. Please see attached appendices required to complete the challenge process (Challenge Report, Challenge Report Inspector Certification, Challenge Poll Site Oaths)			
CR-2	O The EPBS-PS may provide inspectors of election the ability to enter the name, address and registration serial number of each person who claims a change in name, or a change of address within the election district, together with the new name or address of each such person. The EPBS- PS may provide a place in the voter's record for the inspectors to record the information required to be entered in such 'section one' or provide a separate section for the inspectors of election to enter such information in the EPBS-PS.	Optional		Functional
CR-3	O The EPBS-PS may provide inspectors the ability to enter the name, address and county voter ID of each person who is challenged on the day of election, together with the reason for the challenge. The EPBS-PS may provide a place in the voter's record for the inspectors to record the information required to be entered in such 'section two' or provide a separate section for the inspectors to enter such information in the EPBS-PS. If no voters are challenged, the EPBS-PS shall provide inspectors the ability to enter the words "No Challenges" in the space reserved for such names in the EPBS-PS.	Optional	=	I Functional

The EPBS-PS may be capable of printing a certification at the end of the challenge report stating Optional that the entries made are a true and accurate record of its proceedings with respect to the persons named in such report.	Functional	onal	x
 The EPBS-PS may be capable of printing a challenge report which contains the names of: All persons who were reported a name or address change (section 1); All persons who were challenged on the day of election, and that each voter so reported as having been challenged took the oaths as required (section 2), All voters to whom such board gave or allowed assistance and lists the nature of the disability which required such assistance to be given and the names and family relationship, if any, to the voter of the persons by whom such assistance was rendered; that each such assisted voter informed such board under oath that he required such assistance and that each person renderi such assistance to ok the required oath (section 3); All voters who were permitted to vote although their registration poll records were missing (affidavit ballots / court orders) (section 4) 	 The EPBS-PS may be capable of printing a challenge report which contains the names of: All persons who were reported a name or address change (section 1); All persons who were challenged on the day of election, and that each voter so reported as having been challenged took the oaths as required (section 2), All voters to whom such board gave or allowed assistance and lists the nature of the disability which required such assistance to be given and the names and family relationship, if any, to the voter of the persons by whom such assistance was rendered; that each such assisted voter informed such board under oath that he required such assistance and that each person rendering such assistance to vote although their registration poll records were missing (affidavit ballots / court orders) (section 4) 	 0	ng Optional
Section Four – voters pursuant to court order or affidavit The EPBS-PS may provide inspectors the ability to enter the name, address and county voter ID each person who was permitted to vote pursuant to a court order, or to vote on a paper ballot which was inserted in an affidavit envelope. The EPBS-PS may provide a place in the voter's record for the inspectors to record the information required to be entered in such 'section four' or provide a place for the inspectors to enter such information in the EPBS-PS. If there are no such names, the EPBS-PS shall provide inspectors the ability to enter the word "None" in the space provided for such names in the EPBS-PS.	Section Four – voters pursuant to court order or affidavit Optional The EPBS-PS may provide inspectors the ability to enter the name, address and county voter ID of each person who was permitted to vote pursuant to a court order, or to vote on a paper ballot which was inserted in an affidavit envelope. The EPBS-PS may provide a place in the voter's record for the inspectors to record the information required to be entered in such 'section four' or provide a place for the inspectors to enter such information in the EPBS-PS. If there are no such names, the EPBS-PS shall provide inspectors the ability to enter the word "None" in the space provided for such names in the EPBS-PS.	ur, t of	D of Optional
Section Three – voters requiring assistance and who assisted The EPBS-PS may provide inspectors the ability to enter the name, address and county vote each voter given assistance, together with the reason the voter was allowed assistance, the of the person giving such assistance and his address if not an inspector. The EPBS-PS may pr a place next to the voter's name for the inspectors to record the information required to be entered in such 'section three' or provide a place for the inspectors to enter such informatic the EPBS-PS. If no voters are given assistance, the EPBS-PS shall provide inspectors the abilit enter the words "No Assistance" in the space reserved for such names in the EPBS-PS.	Section Three – voters requiring assistance and who assisted Optional The EPBS-PS may provide inspectors the ability to enter the name, address and county voter ID of each voter given assistance, together with the reason the voter was allowed assistance, the name of the person giving such assistance and his address if not an inspector. The EPBS-PS may provide a place next to the voter's name for the inspectors to record the information required to be entered in such 'section three' or provide a place for the inspectors to enter such information in the EPBS-PS. If no voters are given assistance, the EPBS-PS shall provide inspectors the ability to enter the words ''No Assistance'' in the space reserved for such names in the EPBS-PS.	e ē Of	e e

7.5 Technical Data Package Review

NYSTEC performed an examination and review of the totality of materials provided by the vendors in response to the TDP Requirements of the *Electronic Poll Book System (EPBS) Application for Approval Checklist*. The *Voluntary Voting System Guidelines 1.0 2005* was used as a framework for guidance to determine contents of each of the 12 TDP sections. Each submission was reviewed to determine if the vendor had provided information for each of the categories listed, and enough information in the aggregate to comply with the requirement's stated purpose of identifying the full system configuration for evaluation.

Technical Data Package contents include the following:

- System configuration overview
- System hardware specifications
- System test and verification specifications
- User/system operations procedures
- Personnel deployment and training requirements
- Quality assurance program
- System functionality description
- Software design and specifications
- System security specifications
- System maintenance procedures
- Configuration management plan
- System change notes

System hardware specifications	System functionality description	System Configuration Overview	Application Requirements
WSG Vol 2: 2.4	WSG Vol 2: 2.3	VVSG Vol 2: 2.2	VVSG Vol. 2 Mapping
System Hardware Specification	System Description	System Overview	Requirement Type (VVSG Category)
The vendor shall expand on the system overview by providing detailed specifications of the hardware components of the system, including specifications of hardware used to support the telecommunications capabilities of the system, if applicable.	The vendor shall declare the scope of the system's functional capabilities, thereby establishing the performance, design, test, manufacture, and acceptance context for the system. The vendor shall provide a listing of the system's functional processing capabilities, encompassing capabilities required by the Guidelines and any additional capabilities provided by the system. This listing shall provide a simple description of each capability. Detailed specifications shall be provided in other documentation required for the TDP.	In the system overview, the vendor shall provide information that enables identification the functional and physical components of the system, how the components are structured, and the interfaces between them. The vendor shall include system description and details of the system performance.	Guidance

System hardware specifications	Application Requirements
2.4.1 2.4.1 2.4.1	VVSG Vol. 2 Mapping
System Hardware Characteristics	Requirement Type (VVSG Category)
The vendor shall provide a detailed discussion of the characteristics of the system including: -Performance attributes and operational scenarios that describe the manner in which system functions are invoked, describe environmental capabilities, describe life expectancy, and describe any other essential aspects of system performance. -Physical characteristics: This discussion addresses suitability for intended use, requirements for transportation and storage, health and safety criteria, security criteria, and vulnerability to adverse environmental factors. -Reliability: This discussion addresses system and component reliability stated in terms of the system's operating functions, and identification of items that require special handling or operation to sustain system reliability. -Maintainability: Maintainability represents the ease with which maintenance actions can be performed based on the design characteristics of equipment and software to self-diagnose problems and for reacting to failures. Maintainability includes the ability of equipment and software to self-diagnose problems and make non-technical election workers aware of a problem. Maintainability also addresses a range of scheduled and unscheduled events. -Environmental conditions: This discussion addresses the ability of the system to withstand natural environments, including all requirements and restrictions regarding electrical service, telecommunications services, environmental	Guidance

System Security Specification	Software Design and Specification	Design and Construction	Requirement Type (VVSG Category)
Vendors shall submit a system security specification that addresses the level of security provided by the system in terms of the specific security risks addressed by the system, the means by which each risk is addressed, the process used to test and verify the effective operation of security capabilities and, for systems that use public telecommunications networks the means used to keep the security capabilities of the system current to respond to the evolving threats against these systems.	The vendor shall expand on the system overview by providing detailed specifications of the software components of the system, including software used to support the telecommunications capabilities of the system, if applicable. This includes software overview, software standards and conventions, software operating environment, hardware environment and constraints, software environment, software functional specifications, configurations and operating modes, software functions, programming specifications with overview and details, system database, interfaces, and interface identification and description.	The vendor shall provide sufficient data, or references to data, to identify unequivocally the details of the system configuration submitted for testing. The vendor shall provide a list of materials and components used in the system and a description of their assembly into major system components and the system as a whole.	Guidance

Software Installation	Equipment and Data Security	Access Control Measures	Access Control Policy	Requirement Type (VVSG Category)
The vendor shall provide a detailed description of the <i>Pollbook v3.4 installation and</i> system capabilities and mandatory procedures for purchasing jurisdictions to ensure secure software (including firmware) installation to meet the specific requirements. This information shall address software installation for all system components.	The vendor shall provide a detailed description of system capabilities and mandatory procedures for purchasing jurisdictions to prevent disruption of the voting process and corruption of voting data. This information shall address measures for polling place security.	The vendor shall provide a detailed description of all system access control measures and mandatory procedures designed to permit access to system states in accordance with the access policy, and to prevent all other types of access. The vendor also shall define and provide a detailed description of the methods used to preclude unauthorized access to the access control capabilities of the system itself.	The vendor shall specify the features and capabilities of the access control policy recommended to purchasing jurisdictions to provide effective EPBS security. The access control policy shall address the general features and capabilities and individual access privileges.	Guidance

System Operations Procedures	System Test and Verification Specification	Telecommunication s and Data Transmission Security	Requirement Type (VVSG Category)
This documentation shall provide all information necessary for system use by all personnel who support pre-election and election preparation, polling place activities and central counting activities, as applicable, with regard to all system functions and operations identified in Subsection 2.3 above. The nature of the instructions for operating personnel will depend upon the overall system design and required skill level of system operations support personnel. The system operations procedures shall contain all information that is required for the preparation of detailed system operating procedures, and for operator training. This includes details describing the operational environment, system installation and test specification, operational features, operating procedures, and operations support.	The vendor shall provide test and verification specifications for development test specifications. The vendor shall describe the plans, procedures, and data used during software development and system integration to verify system logic correctness, data quality, and security.	The vendor shall provide a detailed description of the system capabilities and mandatory procedures for purchasing jurisdictions to ensure secure data transmission. For all systems, this information shall address access control, and prevention of data interception.	Guidance

Personnel Deployment and Training Requirements	System Manual Manual	Requirement Type (VVSG Category)
The vendor shall specify the number of personnel and skill levels required to perform each of the following functions: Pre-election or election preparation functions (e.g., entering an election, generating pre-election reports. System operations for voting system functions performed at the polling place System operations for voting system functions performed at the central count facility Preventive maintenance tasks. Diagnosis of faulty hardware or software Corrective maintenance tasks. Testing to verify the correction of problems.	The system maintenance procedures shall provide information in sufficient detail to support election workers, information systems personnel, or maintenance personnel in the adjustment or removal and replacement of components or modules in the field. Technical documentation needed solely to support the repair of defective components or modules ordinarily done by the manufacturer or software developer is not required. Recommended service actions to correct malfunctions or problems shall be discussed, along with personnel and expertise required to repair and maintain the system; and equipment, materials, and facilities needed for proper maintenance. This manual shall include maintenance procedures, preventative maintenance procedures, corrective maintenance equipment as well as parts and materials, common standards, maintenance facilities and support. Quality assurance program	Application Requirements Configuration management plan	
VVSG Vol 2: 2.12	WSG Vol. 2 WSG Vol 2: 2.11	
Quality Assurance Program	(VVSG Category) Configuration Management Plan	Requirement Type
Vendors shall submit a Quality Assurance Program that addresses the quality assurance policies, processes, and procedures employed by the vendor to ensure the overall quality of the system for its initial development and release and for subsequent modifications and releases. This information is particularly important to support the design of test plans by the accredited test lab. A well-organized, robust and detailed Quality Assurance Program will more readily determine the nature and scope of tests needed to test the system appropriately. The Quality Assurance Program shall, at a minimum, address Quality Assurance Policy, Parts and Materials Tests, and Quality Conformance Inspections.	Guidance Vendors shall submit a Configuration Management Plan that describes all policies, processes, and procedures employed by the vendor to carry out these requirements. Information submitted by the vendor shall be used by to assist in developing and executing the test plan. This information is particularly important to support the design of test plans for system modifications. A well-organized, robust and detailed Configuration Management Plan will enable testers to more readily determine the nature and scope of tests needed to fully test the modifications. The Configuration Management Policy, Configuration Identification, Baseline and Promotion, Configuration Control Procedures, Release Process, Configuration Audits, and Configuration Management Resources.

System change notes	Application Requirements
VVSG Vol 2: 2.13 System Change Notes	VVSG Vol. 2 Mapping
System Change Notes	Requirement Type (VVSG Category)
"Vendors submitting modifications for a system that has been previously approved by NYSBOE shall submit system change notes. These will be used to assist in developing and executing the test plan for the modified system. The an example of the system change notes shall include the following information: Summary description of the nature and scope of the specific changes made, citing the specific system configuration items changed, providing detailed references to the documentation sections changed, a detail of the specific sections of the documenta, if more suitable to address a large number of changes), documentation of the test plan and procedures executed by the vendor for testing the individual changes, and the system as a whole, and records of test results."	Guidance
